Randomization
<u>Random Number Generator (RNG)</u>

The algorithm used for pseudo-random number generation (PRNG) is Deterministic Random Bit Generator (DRBG). The cryptographically-secured (CSPRNG) implementation from the OpenSSL library version 1.1.1f (released 31 Mar 2020) is used. Additionally, background cycling and periodic reseeding are used.

OpenSSL comes with a default implementation of the RAND API which is based on the DRBG model as described in NIST SP 800-90A Rev. 1. OpenSSL library is evaluated by the Open Source Technology Improvement Fund and the security assessment can be found at https://ostif.org/wp-content/uploads/2019/01/18-04-720-REP_v1.2.pdf.

Malfunction Management

If a player attempts to access a game using an invalidated session, (for example, due to inactivity or system restart) an error message is displayed in the game. The player can then log on again and resume game play. The game state is always stored so the player can resume game play exactly where he or she left off.

In case of an HTTP error, network timeout or server error a "technical error" message will be displayed to the player.

Information to the Player

Players have access to game rules from within the game at all times.
